Free For Members  
&  
Non-Members

Optimum Seismic has been making California cities safer since 1984 by providing full-service earthquake engineering, steel fabrication and construction services for multifamily residential, commercial and industrial buildings. With more than 3,500 earthquake retrofit and renovation projects completed, Optimum Seismic's work includes soft-story multifamily apartments, unreinforced masonry (URM) buildings and tilt-up, non-ductile concrete and steel moment frame buildings. Join Narek Ekmekjian to learn more. He has vast experience in the contracting industry, including construction of residential, commercial and government projects.
